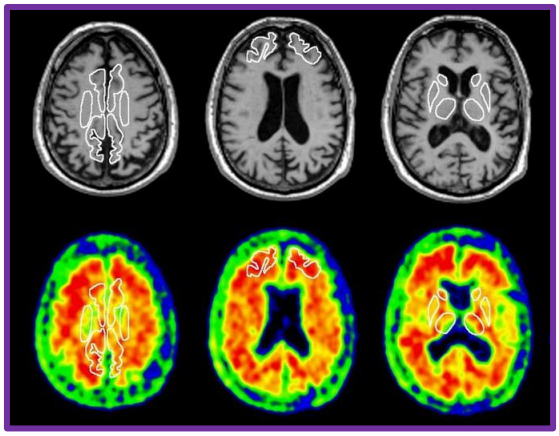
Do you experience SOCIAL ANXIETY?

Volunteers wanted for brain imaging study



Researchers at CAMH are conducting a PET (positron emission tomography) imaging study to look at the endocannabinoid system in the brain of individuals with social anxiety disorder.

This study involves a screening phone call, an assessment visit, cognitive tests, and one or more scan days involving one MRI and one PET scan with blood draws.

To be eligible, volunteers must meet the following criteria:

- be **18 - 40** years old
- experience severe shyness or anxiety in social settings /in front of others
- no current drug or alcohol abuse
- no unstable medical condition
- no neurological illness (seizures, epilepsy) or head trauma
- no metal implants in body
- not pregnant / breastfeeding
- not claustrophobic
- not have been exposed to radiation more than 4 times (in the past year)
